SUMMARY

AI Engineer leading client-facing AI engagements end to end, from discovery and solution design to delivery and executive demo, with solutions converting into six-figure contract value. Now researching agentic workflows at the University of Houston.

EDUCATION

University of Houston - MS in Engineering Data Science and AI Sep 2026 - Present
FAST-NUCES - BS in Artificial Intelligence 2021 - 2025

WORK EXPERIENCE

Research Assistant - University of Houston Sep 2026 - Present

- Performing research on agentic workflows.

AI Engineer - Ember AI (via Remotebase) Feb - Aug 2026

- Led delivery of 11 client-facing AI engagements across healthcare, logistics, retail, education and professional services, owning each from discovery through executive demo.
- Engagements I led converted into the company's first Enterprise Intelligence contract (approx. \$111K) and an approx. \$100K healthcare agreement, with three more reaching signed proposal.
- Directed the SOC 2 Type II and HIPAA readiness program across 8 production applications, raising audit readiness from 80% to 93% HIPAA and 91% SOC 2 in six weeks.
- Ran competitive vendor procurement for the external penetration-testing engagement, from scoping and evaluating 10 vendors through negotiation and contract.
- Set the architecture direction for the multi-tenant enterprise intelligence platform and led a multi-agent product that cut specification cycle time from days to minutes.

Junior AI Engineer - CareCloud Inc. Jun 2025 - Feb 2026

- Led a team of 10+ engineers delivering HIPAA-compliant voice agents (StratusAI) that automated front-desk operations for healthcare providers and integrated with EHR systems (CareCloud Health, TalkEHR).
- Directed the design of a conversational pipeline spanning VAD, turn detection, ASR/STT, LLMs and TTS for real-time intent recognition.
- Oversaw delivery of an ML pipeline parsing EDI 837 claims into 40+ fields at 95%+ accuracy, removing a manual bottleneck in claims processing.

IT Intern - CareCloud Inc. Mar 2025 - May 2025

- Built a voice agent benchmarking call transcripts against KPI metrics; the coaching material it produced drove a 20% gain in team efficiency.

Machine Learning Intern - Teradata Jun 2024 - Aug 2024

- Delivered large-scale financial analytics models on Teradata Vantage and scikit-learn, owning pipelines from preprocessing through evaluation.

AI Intern - Systems Limited Jul 2023 - Sep 2023

- Automated the team's data science pipeline and built an internal application letting non-specialists train, evaluate and save models in a few clicks.

Machine Learning Intern - Rapidev Jun 2023 - Jul 2023

- Supported deployment of object detection models for a major Saudi project and led annotation efforts, improving model accuracy by 53%.

SKILLS

- Languages and Frameworks:** Python, SQL, React, PyTorch, TensorFlow, scikit-learn, LangChain, LangGraph, Transformers, FastAPI
- AI and ML:** Agentic AI, Multi-Agent Systems, RAG, Knowledge Graphs, Generative AI, LLMs, Computer Vision, NLP, Deep Learning, MLOps
- Cloud and Security:** AWS (ECS, CloudWatch, GuardDuty, S3, RDS, Lambda), Docker, PostgreSQL, MongoDB, SOC 2, HIPAA, Vanta
- Tools and Platforms:** Git, GitHub Actions, Apache Airflow, DVC, MLFlow, n8n, Model Context Protocol (MCP), ChromaDB, KuzuDB

PROJECTS

- CCTV Surveillance System:** Vision Transformer for violent activity detection with adversarial training, YOLOv8 for real-time detection, CLIP for scene understanding and LangChain for reporting.
- Drug Fact-Checking Multi-Agent System:** Multi-agent system using LLaMa 3.1, PubMedBERT and ChromaDB to verify drug-related queries against medical literature before responding.
- PK Constitution Knowledge Graph:** Queryable knowledge graph over Pakistan's Constitution using Qwen, Ollama and KuzuDB for graph-based retrieval over legal documents.
- Multi-Agent RAG Travel Planner:** Multi-agent planning system using RAG and vector embeddings to generate cost-optimized itineraries with real-time data retrieval.
